During 1988, 233 official samples of fertilizer were collected by inspectors of the Connecticut Department of Agriculture and examined for authenticity of guaranteed analysis that is stated on the label and compliance with State Regulations. Other fertilizer samples were tested for farmers and Station research, but our findings are not included in this Bulletin. Although all guaranteed analyses are examined, only the results for the major plant nutrients of nitrogen, phosphoric acid, and potash are presented here.

Table 1 shows individual samples from 39 manufacturers. The numbers preceding the brand name are the guaranteed analyses. For example, 10-10-10, indicates the guaranteed percentage for nitrogen (N), phosphoric acid (P2O5), and potash (K2O), in that order. The actual content is then shown, with deficiencies indicated by a dash (-) following the amount found. Table 2 summarizes for each manufacturer the number of guarantees examined for each plant nutrient, the percentage of samples not meeting their guarantee, and the average percentage of guarantee found. Table 3 shows the tonnage of the various grades of mixed fertilizer sold in Connecticut. Only grades prepared by at least three manufacturers are shown; other grades are placed in the miscellaneous category. The tonnage of fertilizer material and mixed fertilizer sold in Connecticut is shown in Table 4.

Two types of variability affect fertilizer analysis and must be considered in judging deficiencies. The first is the variability among different batches of the same grade from a manufacturer. This variability can be noted in Table 1 by examining the analyses of the same grade from the same manufacturer. The second type of variability is between duplicate analyses of the same sample. The variability among duplicate analyses is shown in the statement: the mean difference between duplicates for nitrogen, phosphoric acid, and potash is about two-tenths percent.

Fertilizer samples are deemed deficient in any nutrient if the analysis is below the guarantee by more than the values established by the Association of American Feed Control Officials. Overall, 219 guarantees for nitrogen were tested and 13.7% were deficient; 218 guarantees for phosphoric acid were tested and 12.8% were deficient; and 212 guarantees for potash were tested and 18.3% were deficient. In 1987 the percentages of deficiencies for nitrogen were 13.5%, for phosphoric acid 20.4%, and for potash 13.7%. Thus the percentage of deficiencies for nitrogen remained the same, decreased for phosphoric acid, and increased for potash.

Analyses were performed by Craig Musante, Mamie Pyles, and Mary Alice DeFrancesco. Samples were collected by Marlene Abt, John Chapman, Richard Macsuga, Richard Olson, and Ronald Weller under the direction of Kenneth Veit. Fertilizer laws are administered by the Commissioner of Agriculture.

Lester Hankin  
Chief, Analytical Chemistry

Table 4--Tonnage of fertilizer material and mixed fertilizers sold in Connecticut July 1, 1987-June 30, 1988

Commodity	Tons	Commodity	Tons
CHEMICAL NITROGEN		NATURAL ORGANICS	
Ammonium nitrate	72.1	Blood meal	7.3
Ammonium sulfate	9.5	Bonemeal	14.1
Calcium nitrate	46.2	Cottonseed meal	117
Nitrogen solutions	6	Gelatin	9.9
Other nitrogen mater.	1.3	Greensand	2
Sodium nitrate	2.4	Manure, cow, composted	49
Urea	1560.3	Manure, cattle, dried	39.8
Ureaform	3	Manure, poultry, dried	10.2
Urea-sulfur coated	14		
TOTAL	1714.8	TOTAL	249.3
PHOSPHATES		MULTINUTRIENT	
Ammonium phosphate	31	Minor elements	2.5
Bone meal, steamed	52.7	TOTAL	2.5
Superphosphate	120.4		
Other phosphates	125.9	SECONDARY & MICRONUTRIENTS	
TOTAL	330	Aluminum	2.6
LIMING MATERIALS		Aluminum sulfate	1
Gypsum	106	Borax	27.6
lime	11	Ferrous sulfate	1.2
TOTAL	117	Iron, chelated	1
POTASH		Iron	2.1
Carbonate of potash	3	Magnesium oxide	0.5
Muriate of potash	156.8	Sulfur	5.8
Potassium nitrate	67	Zinc sulfate	1
Potassium sulfate	9	Miscellaneous	17.1
Sufate of potash	14	TOTAL	59.9
Sulfate potass/magnes	7		
TOTAL	256.8	TOTAL COMMODITIES	2730.3
		TOTAL COMMERCIAL FERTILIZERS	34626
		GRAND TOTAL	37356.3

The Connecticut Agricultural Experiment Station, founded in 1875, is the first experiment station in America. It is chartered by the General Assembly to make scientific inquiries and experiments regarding plants and their pests, insects, soil and water, and to perform analyses for State agencies. The laboratories of the Station are in New Haven and Windsor; its Lockwood Farm is in Hamden. Single copies of bulletins are available free upon request to Publications; Box 1106; New Haven, Connecticut 06504.
